Mediapipe Environment Setup

Mediapipe Environment Setup
1. Install Mediapipe
2. Verify Mediapipe

Mediapipe is a cross-platform framework provided by Google for building multimodal (e.g., image, audio, video) processing pipelines.

1. Install Mediapipe

Install Mediapipe using pip:

```
sudo pip3 install mediapipe --break-system-packages
```

```
jetson@ubuntu:~$ sudo pip3 install mediapipe --break-system-packages
Requirement already satisfied: mediapipe in /usr/local/lib/python3.12/dist-packa
ges (0.10.18)
Requirement already satisfied: absl-py in /usr/local/lib/python3.12/dist-package
s (from mediapipe) (2.4.0)
Requirement already satisfied: attrs>=19.1.0 in /usr/local/lib/python3.12/dist-p
ackages (from mediapipe) (25.4.0)
Requirement already satisfied: flatbuffers>=2.0 in /usr/local/lib/python3.12/dis
t-packages (from mediapipe) (25.12.19)
Collecting jax (from mediapipe)
```

Install dlib using pip: This library is required for some cases.

```
sudo pip3 install dlib --break-system-packages
```

```
jetson@ubuntu:~$ sudo pip3 install dlib --break-system-packages

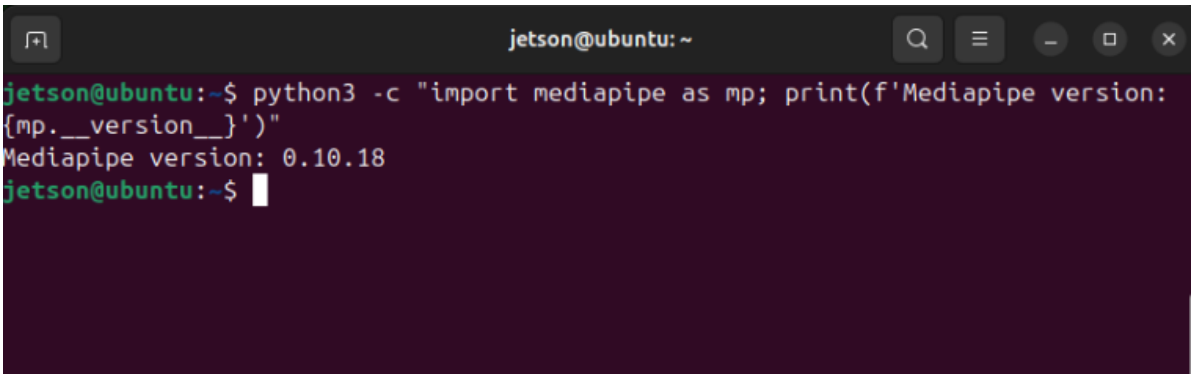
WARNING: Running pip as the 'root' user can result in broken permissions and con
flicting behaviour with the system package manager. It is recommended to use a v
irtual environment instead: https://pip.pypa.io/warnings/venv
jetson@ubuntu:~$
```

2. Verify Mediapipe


```
python3 -c "import mediapipe as mp; print(f'Mediapipe version:
{mp.__version__}')"
```
