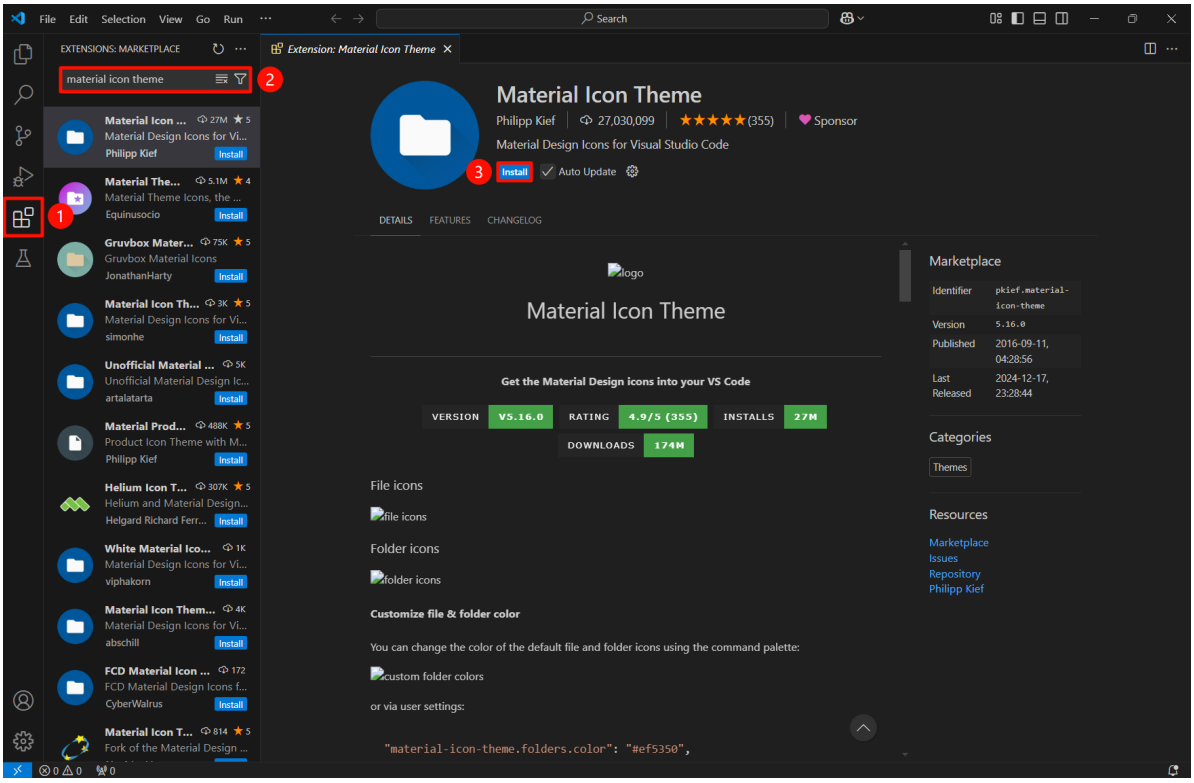
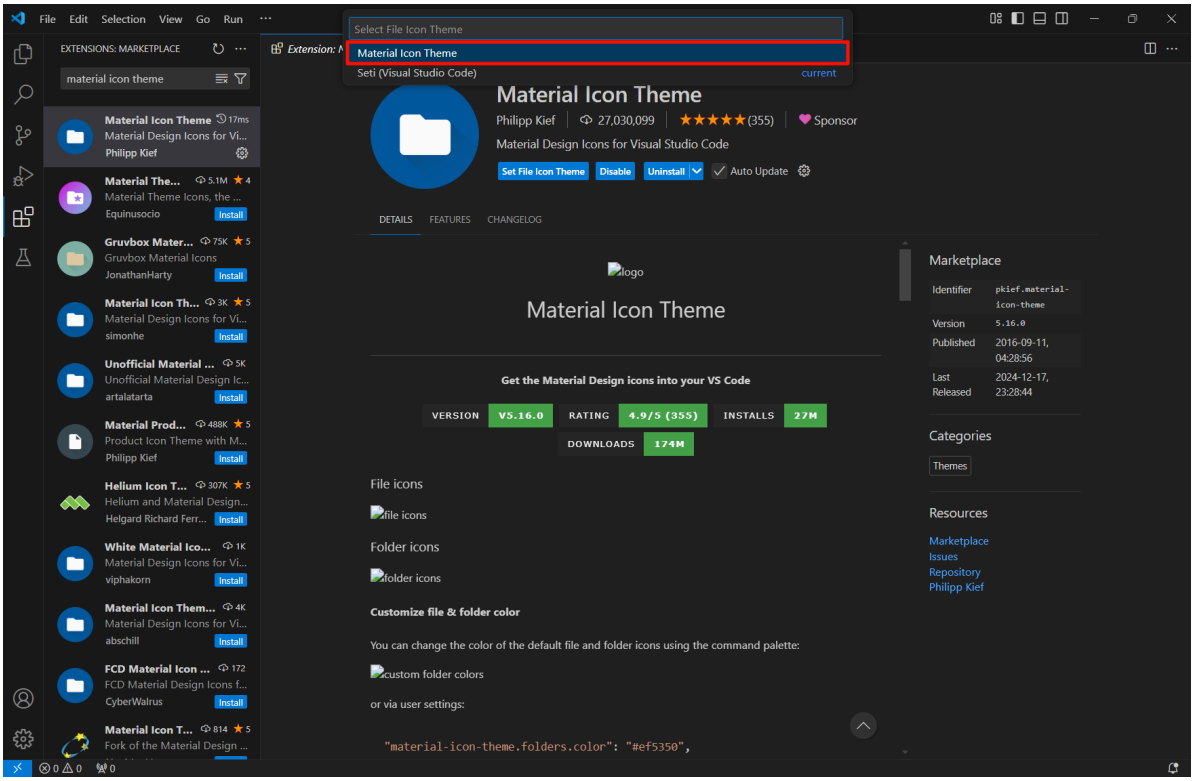
Search for "material icon theme" in the expanded search bar, and select Material Icon Theme to install:

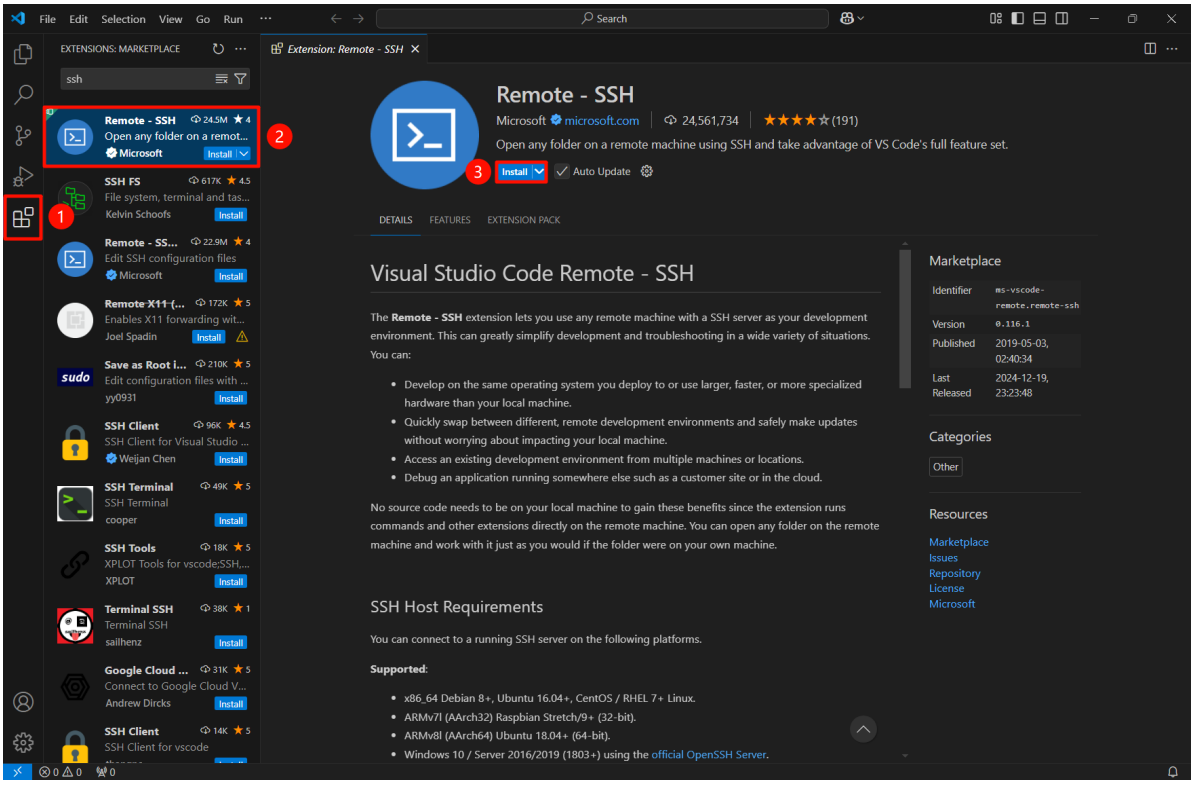




3.2.2, Remote-SSH

ssh installation

Search for "ssh" in the expanded search bar , select Remote-SSH to install:

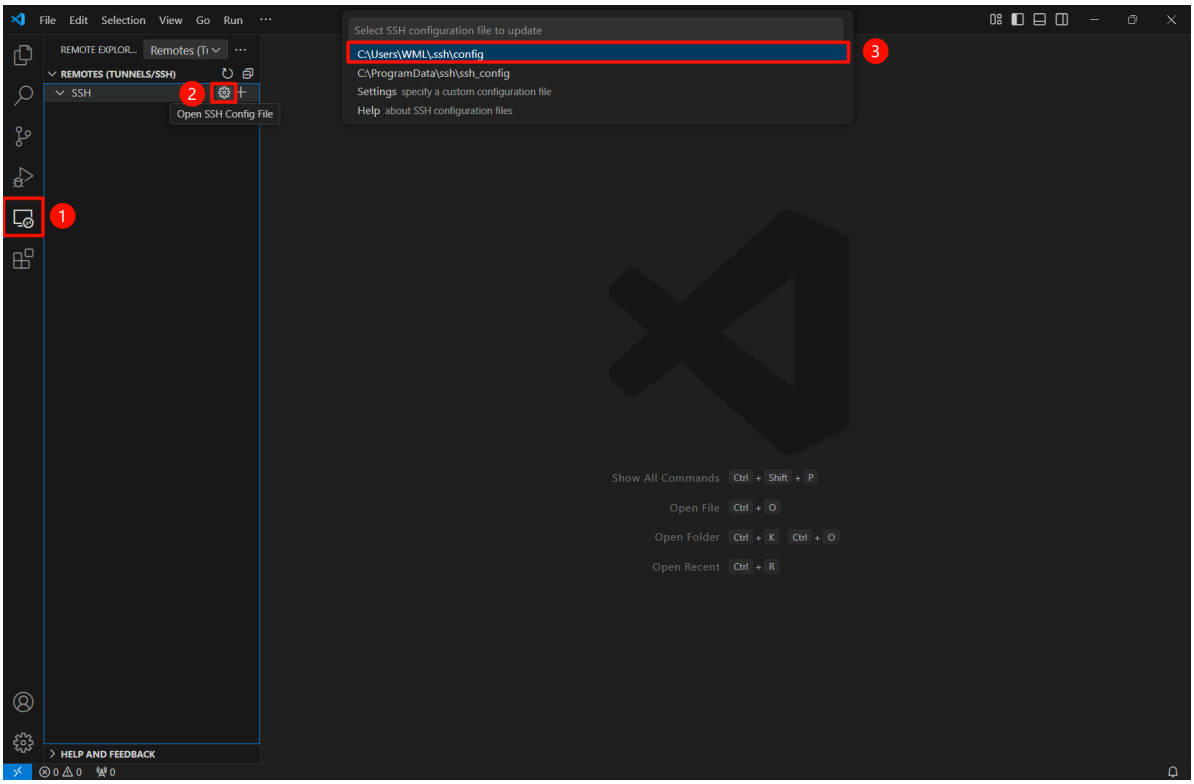


ssh usage

After Remote-SSH is installed, you can use it directly through the status bar on the left!

```
Different users may have inconsistent path usernames in the configuration file, and there is no impression
```

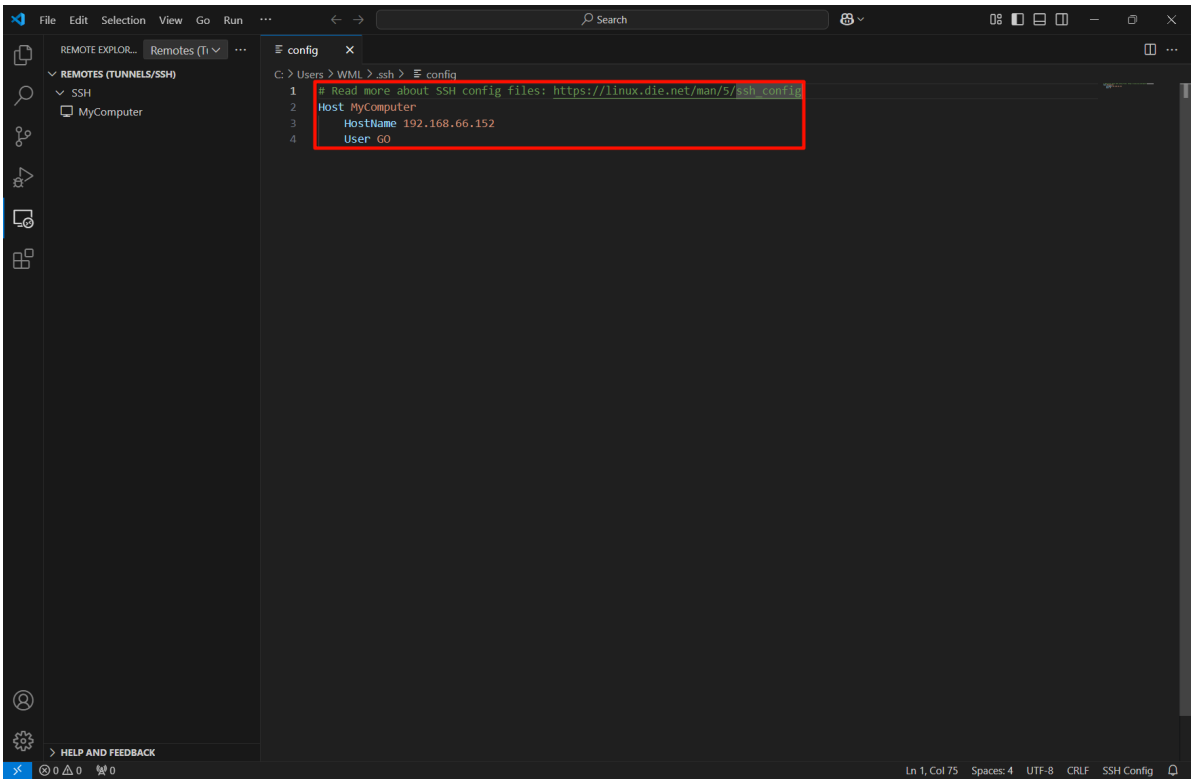
> Configure remote: modify the configuration file



Configure remote: modify the configuration file

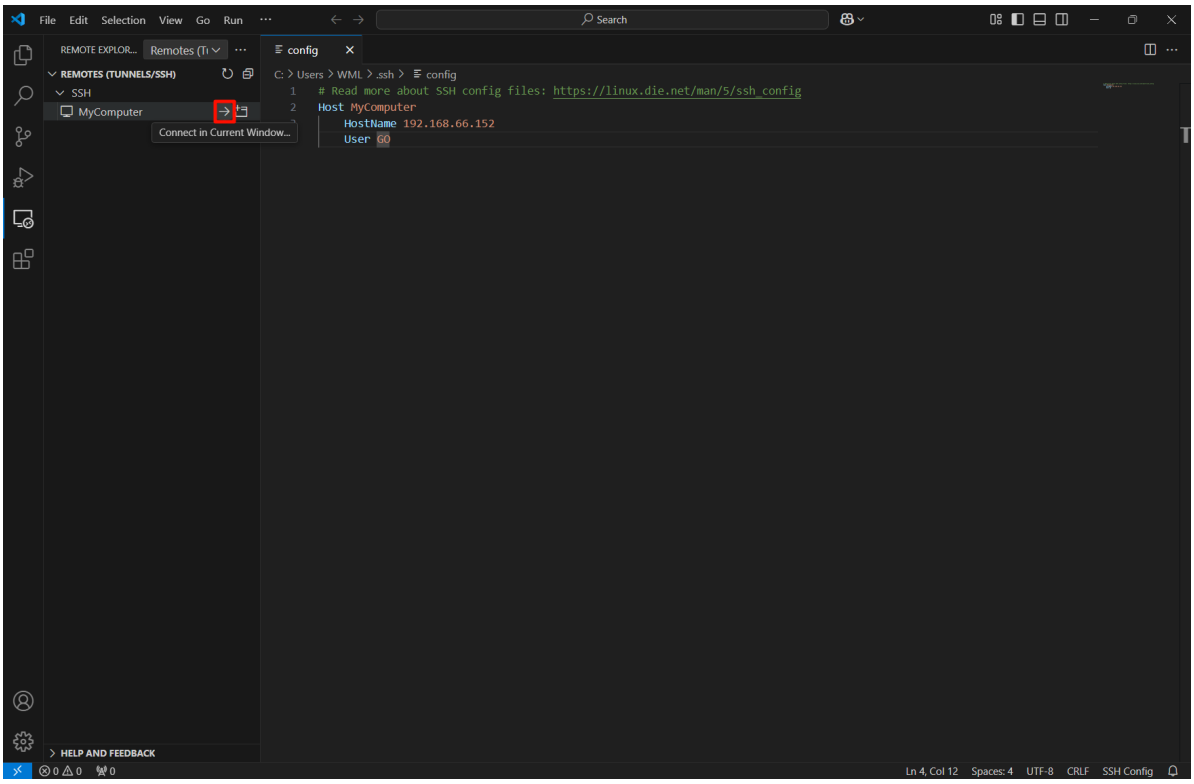
Fill in the device information that needs to be remote, the remote device needs to configure the SSH service and support SSH remote; after filling in, use the Ctrl+S shortcut key to save, and the corresponding SSH remote device will be automatically added on the left.

```
# Read more about SSH config files: https://linux.die.net/man/5/ssh_config
Host MyComputer # Remote device alias
    HostName 192.168.66.152 #  Remote device IP
    User GO # Remote device user name
```

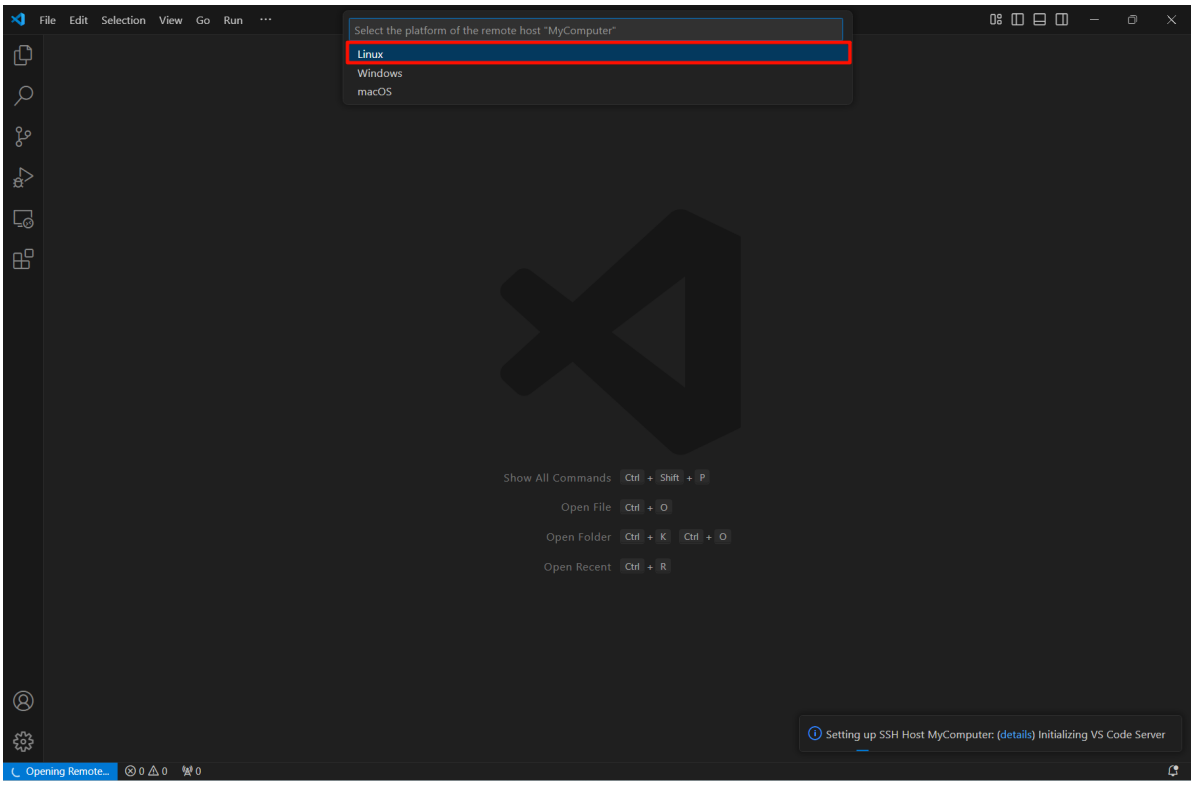


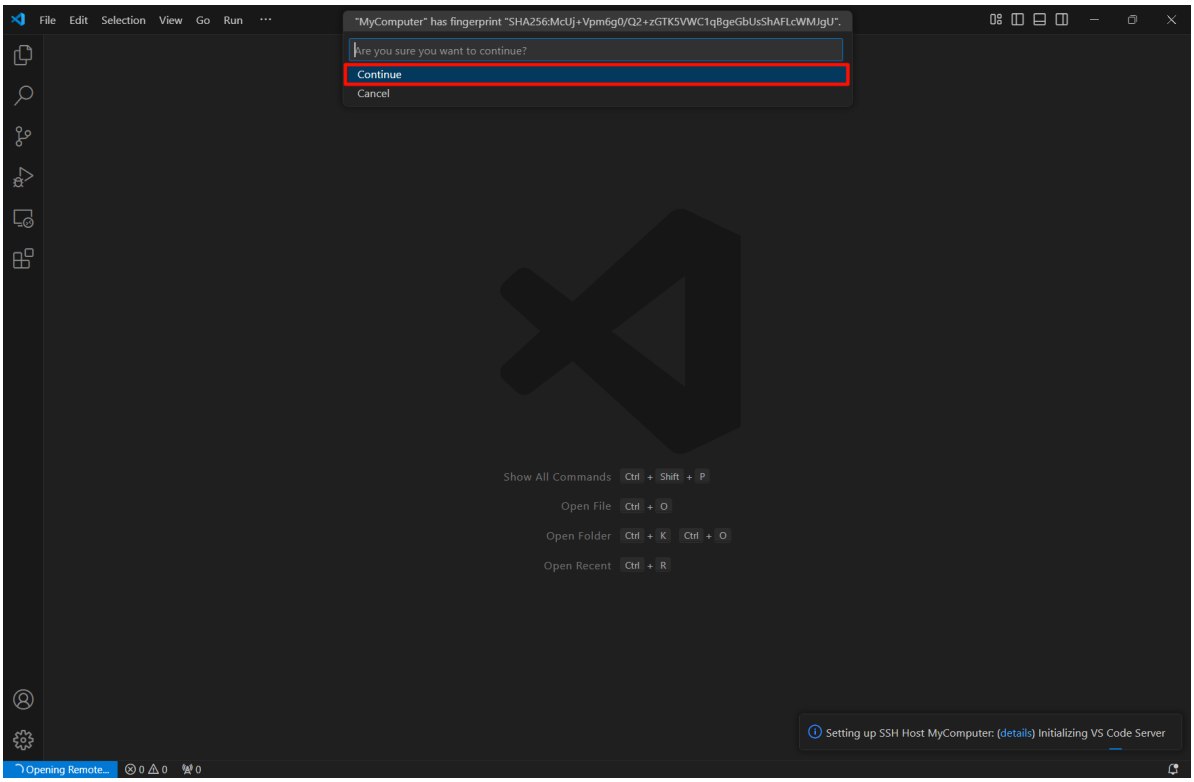
> **Remote**

Select the remote device for SSH remote:

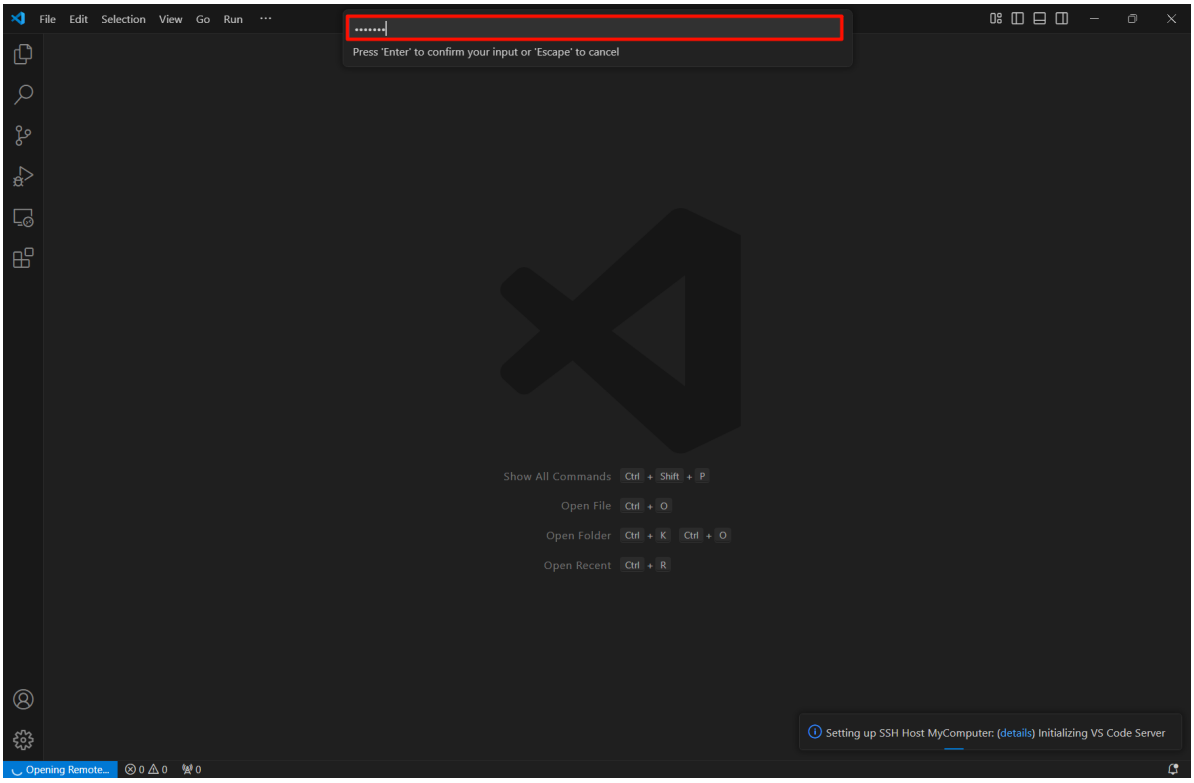


Select the remote device platform: fill in according to the actual platform



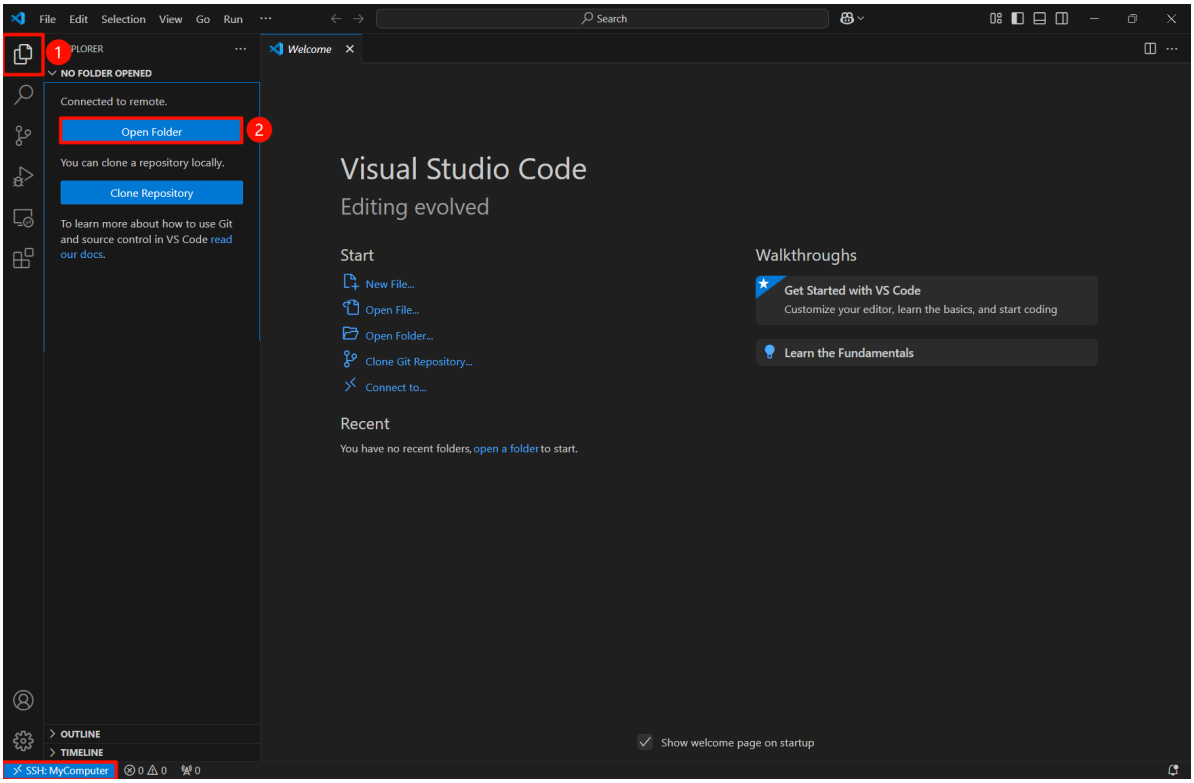


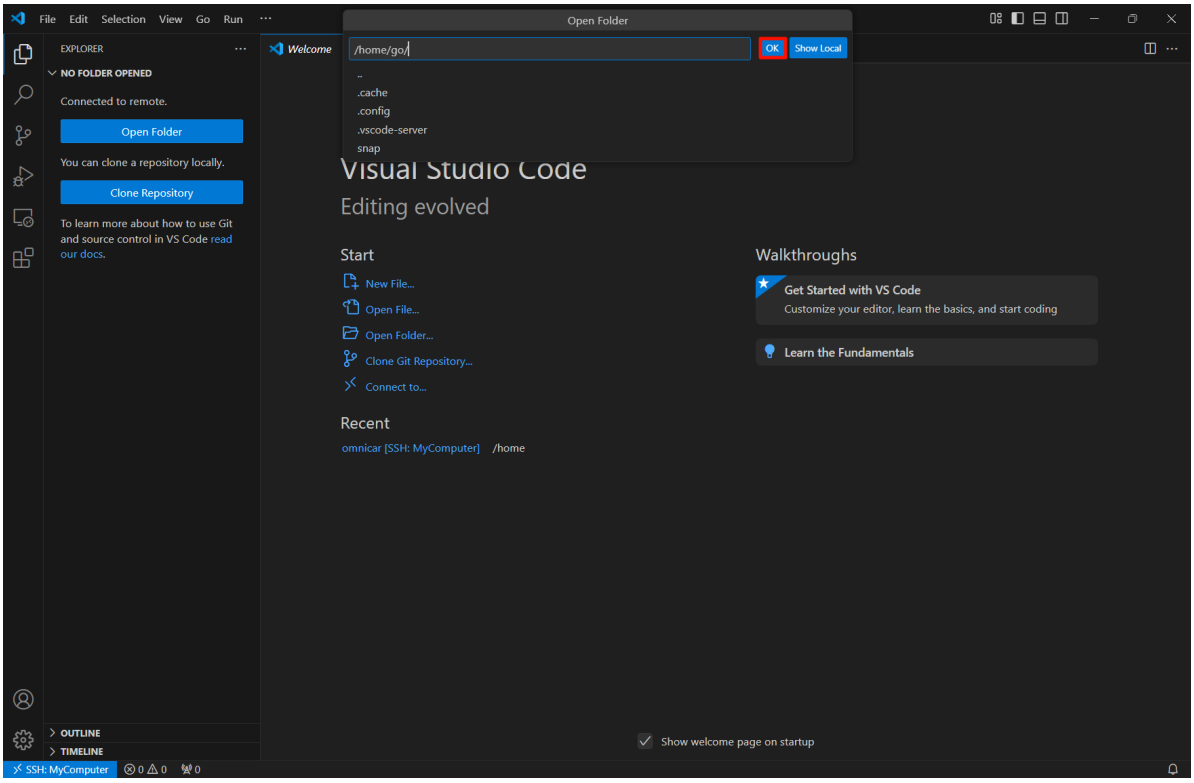
Fill in the password: Enter to confirm after filling in the password



Remote use

After the remote is successful, there is a prompt in the lower left corner; we can open the folder of the remote device through VSCode





Enter the password again:
