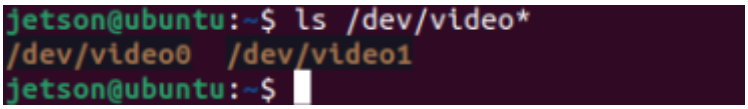
OpenClaw Application - Script Execution

OpenClaw Application - Script Execution
1. Hardware Connection
2. Command Interaction

1. Hardware Connection

Since this example requires the use of a USB camera, please first plug the USB camera into a USB port on the mainboard, and then identify the camera's device number:

```
ls /dev/video*
```



2. Command Interaction

Ensure that OpenClaw has been configured.

Interact via the TUI terminal:

```
openclaw tui
```

Enter interactive commands.

> Write a Python script to control the onboard camera and save it to the desktop. The script should be designed to exit when the user presses the "q" key on the keyboard. Then, run the script to activate the camera.

Write a Python script to control the onboard camera and save it to the desktop. The script should be designed to exit when the user presses the "q" key on the keyboard. Then, run the script to activate the camera.
The script already exists from before. Let me run it again:Camera is now active!
Script: /home/jetson/Desktop/camera_capture.py
Resolution: 1920×1080 @ 30fps
The camera window should be displayed on your monitor. Press q in the window to exit, or s to save a snapshot.
