OpenClaw Application - Dedicated AI Assistant

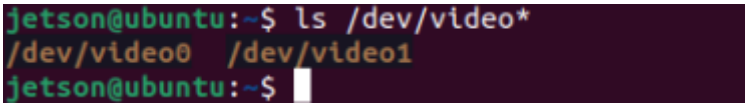
OpenClaw Application - Dedicated AI Assistant

1. Hardware Connection
2. Interactive Commands

1. Hardware Connection

Since this example requires a USB camera, please first plug the USB camera into the motherboard's USB port and check the camera's device ID.

```
ls /dev/video*
```



2. Interactive Commands

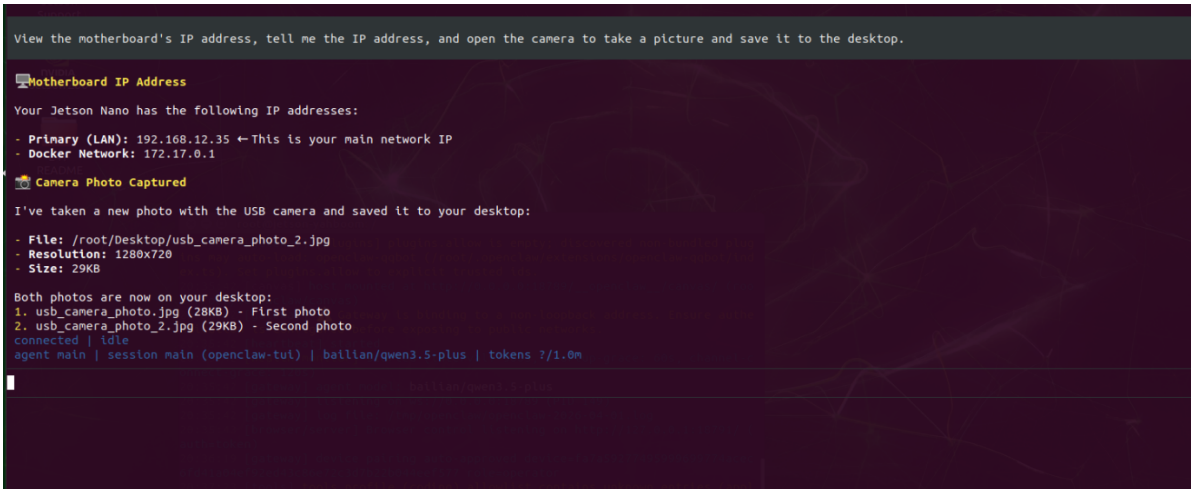
Confirm that OpenClaw has been configured.

Interact with the client in the tui terminal.

```
openclaw tui
```

Enter the interactive command:

> View the motherboard's IP address, tell me the IP address, and open the camera to take a picture and save it to the desktop.



You can now see the image file captured by the camera on your desktop. Please refer to the output information for the image name.
